

Making Connections—Meal Time!

- **Carnivores** are animals that eat other animals. They have sharp teeth to help them bite through meat.
- **Omnivores** are animals that eat both plants and meat. Omnivores have both sharp and flat teeth.
- **Herbivores** are animals that eat just plants. These animals have flat teeth to help grind down the plants.

Directions: Write three specific things that each farm animal would eat. If the animal can eat both meat and plants, write at least one of each.

Barn Cat—carnivore

-
-
-

Templeton—omnivore

-
-
-

Sheep—herbivore
